

## Implementing Zero-Emissions Policy Reforms in SEA’s Building Sector

This Panel will discuss **HOW TO** develop and implement policy reform plans that help countries achieve their NDC targets. Experience from policy-development on the ground in Indonesia and regionally will be shared by key policy makers and experts. We explain seven key policy reform strategies and share insights on how they have been applied to guide the development of new low-emissions building standards in Samarinda, and will support Bali to achieve its clean energy transition. We also share how these subnational policy actions can be fed-back to support further ambition in National climate policy and future NDC revisions.

**Agenda: Date/TIME** 4 November 2021/ 8:30-9:30AM BST **LIVESTREAM** Link: <https://vimeo.com/event/1413624/09e570fae1>
